PROFILE

Business Analyst with 5 years across ad tech, SaaS and manufacturing, turning manual business work into automated, AI-assisted systems. In the CEO's Office at J J Plastalloy I find where work gets stuck, redesign the process, build the tool that runs it (Python, SQL, FastAPI, LLM APIs) and make sure teams actually use it: a 2-day reporting cycle now runs in 15 minutes, meeting minutes went from 1 day to 15 minutes, and a costing and pricing engine is live with the costing and R&D teams. MBA qualified; completing a Data Science & AI certification.

CORE SKILLS

Automation & Development: Python (pandas, NumPy, openpyxl) for exploratory data analysis and automation, Flask, FastAPI, SQLAlchemy, HTML/JavaScript frontends, SQL: workflow and report automation, internal tools, data validation and reconciliation checks

Process & Change: Business process mapping (draw.io, swimlane and value-stream style), workflow redesign, process improvement, requirement gathering, root-cause analysis, SOP documentation, stakeholder interviews, user adoption and change rollout

Reporting & BI: SQL (PostgreSQL, SAP HANA), Power BI (DAX, Power Query, data modelling), Tableau (basic), Looker Studio, executive dashboard and KPI pack design

Systems & Integration: Zoho CRM, Zoho Projects, SAP HANA, REST API integration, LLM API integration, Power Automate

Excel: Advanced modelling, Pivot Tables, Power Query, lookups, What-If analysis, data validation, sheet protection and workbook design for non-technical users, Macros/VBA

Commercial Analytics: Product costing and pricing logic, margin analysis, cost-to-serve and variance analysis

EXPERIENCE

Business Analyst – PMO (CEO's Office) · J J Plastalloy Pvt Ltd — Sep 2024 – Present

Promoted into the CEO's Office in Jul 2025, ten months after joining, to own process automation, internal systems and reporting across Sales, Operations and Technology.

- Automated the monthly sales reporting pack and sales incentive eligibility tracker using Python (pandas, openpyxl): 25 recurring reports, from 2 days to 15 minutes, with totals checked against finance before release.
- Built a semi-automated AI meeting transcription and Minutes of Meeting process for multilingual Hindi, English and Marathi meetings: the AI drafts the minutes, action items and owners, and a person reviews them before they go out, cutting turnaround from 1 day to 15 minutes for around 15 meetings a month.
- Designed and built a costing and pricing system (Python, FastAPI, SQLAlchemy, PostgreSQL) that gives the costing and sales teams one place for customer-wise pricing, with bulk updates, approval exports, role-based access and a full change audit trail. Live with the costing and R&D teams; sales rollout next.
- Own executive reporting and KPI packs used by the CEO and leadership, consolidating recurring reports from multiple systems into automated outputs with built-in data quality checks.
- Led the selection and rollout of Zoho Projects across all departments (compared with Monday.com, Odoo, Asana and ClickUp; chosen on cost and existing Zoho use): built training modules, trained every HOD and the plant team, and configured workflows, ownership and automated follow-ups. Now used by 70+ people, fully replacing Excel-and-email tracking.
- Mapped cross-departmental workflows through interviews with department heads and frontline staff, found handoff delays and undocumented workarounds, then redesigned and digitised the processes.
- Led a CEO-sponsored customer win-back initiative: segmented and prioritised lapsed accounts by recoverability and recovered about 50% of the lost business.

Business Analyst · Hevo Technologies (Hevo Data) — Mar 2024 – Aug 2024

- Built a Python solution to map data lineage across tables, models and databases, accelerating a large-scale data-migration project.
- Analysed customer churn and presented the key drivers to the leadership team.
- Built and managed the product notification system to improve user engagement.

Analyst – Ad Operations · Media.net — Oct 2021 – Mar 2024

- Built a report engine producing daily, weekly client and leadership reports for account managers, with PowerPoint templates ready for its data, reducing reporting time by up to 90% and saving 75+ hours a week across the team.

- Built an ads.txt checking engine that verifies whether required ads.txt lines are present across websites and apps, adapting as sites change; still in use.
- Delivered analysis using Excel, Python and Looker Studio that supported over 100% year-over-year revenue growth.
- Streamlined operational workflows and reporting processes to improve turnaround time and accuracy.

SELECTED PROJECTS

Sales Intelligence & Reporting Automation · Python (Flask), SAP HANA, Zoho CRM, HTML/JavaScript, LLM · Built with AI-assisted development

- Built a sales intelligence system, live since Oct 2026, that combines SAP sales data with the Zoho CRM pipeline, giving sales team leaders and the CEO one view of how each BDM and team is performing, how key account workstreams are progressing, and each customer's history.
- Uses AI to generate custom reports only when explicitly requested; standard views run on Python logic, keeping it fast and low-cost.
- Python (Flask) backend with an HTML/JavaScript frontend, run on local servers. Chose this local-first setup over paid cloud APIs after a cost comparison, and wrote the scope of work presented to the CEO.
- Every report is checked against finance figures before it goes out, and any bad records are sent back to the data owner with the reason, so they can be fixed in one go.

Costing & Pricing Engine · Python (FastAPI), SQLAlchemy, PostgreSQL · Built with AI-assisted development

- Built a costing application, designed with the costing and sales teams, that calculates landed product cost from BOM-based raw material, processing cost, margin and freight (domestic, ocean or air), with customer-specific margins to support competitive pricing without losing per-product profitability. Covers 14 product categories and 1,000+ raw-material grades, calculates the same costs as the old manual method (100% match) through a new, better interface, and replaced a 1 GB+ folder of Excel files that had no price history. Live with the costing and R&D teams (7 users) on internal servers; being extended before rollout to the sales team.
- Implemented hierarchy-based access (salespeople see their own customers, team leads see their team), email alerts on price changes, and a full audit trail of rate history, who changed what, when, and the impact.

Monday Sales Briefing · Python, pandas, openpyxl, matplotlib · Portfolio project, fictional data

- Built a Python command that turns a year of sales lines (87,011 rows) into a weekly briefing: it compares the latest complete week with the week before and writes an Excel report with charts and a one-page PDF.
- Builds the email with both files attached and sends only when asked (classic Outlook, or SMTP with the password kept in a .env file); every figure was checked against answers worked out separately.

B2B Account Health and Order Risk · Python, pandas, XGBoost, SHAP, Flask · Portfolio project, fictional data

- Built a pipeline for a B2B supplier (400 accounts, 9,170 orders): data generation, a cleaner scored against the known truth, point-in-time features, and three models (churn, reorder, cancellation), each compared with a simple sales rule.
- The reorder model was right 93% of the time against 72% for the rule; the tool produces a weekly list of accounts to call, with the reasons.

EDUCATION & CERTIFICATION

Data Science & Artificial Intelligence (Certification) · Meritshot — 2025 – Present

Python, Statistics, SQL & Big Data, Data Analysis & Visualisation, Power BI, Machine Learning and Model Deployment.

Master of Business Administration (MBA) · Singhania University — 2018 – 2020

Bachelor of Business Administration (BBA) · Savitribai Phule Pune University — 2014 – 2017
